PIXELUTION

Internal Locker

Having a lockable compartment in the rear of the display with space to fit a small PC or media player means running the screen from an external source is easy – simply use the HDMI or VGA and 5mm audio inputs. This device can be powered from inside the locker with no need for additional power cables.

Surface Plasma Treatment

A special oleophobic coating makes the glass front more resistant to the oily residue left by fingerprints, as well as improving the smoothness of touch gestures. Unlike other touch screens on the market, this glass is not etched to vastly enhance the optical clarity.

24/7 Commercial Grade

Designed for continuous use in public spaces, these displays utilise commercial grade LCD panels, LED backlights and internal components. This means they can run 24/7 for over 70,000 hours. To avoid tampering, they also have no external buttons or controls.

-  Lightweight Design
-  Integrated Android Media Player
-  Premium Brushed Gold Finish
-  Ultra-Resistant to Blackening Defect
-  IPS Panel
-  High Brightness Display (700cd/m²)
-  Easy USB Updates
-  Network Upgrade Available
-  24/7 Commercial Grade

Stylish Elegant Frame
With a minimalistic framework design and high-end brushed gold finish, this unique display exudes luxury and is sure to grab attention in any location.

High Brightness Displays (700cd/m²)
Both sides feature commercial grade high brightness IPS panels for accurately displaying image quality and colour depth with no fall-off in colour accuracy. These panels are designed to achieve ultimate lifelike colour temperature in portrait orientation.

Display Different Content Each Side

The special Android media player can output two separate signals simultaneously. This means that with the networked version of this product, you can display different content on each screen at the same time.

Outward Facing
700 cd/m²

Inward Facing
700 cd/m²

Please note that the same content will be played on both sides of the standard stand alone unit. But difference content can be played on both sides if the unit has been upgraded to the networked CMS

Small Footprint Totems

With a depth of 297mm our totem units don't take up valuable floorspace. This opens up more possibilities of where the totems can be placed. Even better the ultra slim DV-LED cabinets make the perceived depth of the units even smaller.

Effortless Installation & Maintenance

Installing these freestanding displays is a lot simpler than wall mounted counterparts. No matter what your level of experience with DV-LED solutions, installing and maintaining these displays couldn't be easier saving time and money.

Quick and Easy Install

Ultra-Quiet Operation

These DV-LED totems do not require cooling fans due to their super low heat emissions. Not only does this allow them to run silently, which is especially important in indoor spaces, it also makes them more robust and reliable as there are no moving parts.

signage software

PIXELUTION

Easy to Use

With our Digital Signage CMS you can send content from your PC to your display or media player in a matter of seconds using a user-friendly drag-and-drop system.

Free Lifetime Technical Support

We provide free technical support, by phone and email, even after your warranty period and server subscription has expired.

Fully Integrated Solution

Our CMS software is specifically designed to be used with the screens and media players that we manufacture; providing an all-in-one integrated solution.

Reliable

Stable, dependable performance 24 hours a day, 7 days a week that even runs and can be updated while offline. When changes are made the screen or player will only download new files, not the entire content.

Unlimited Storage Space

Unlike other cloud-based platforms we do not put any limits on the amount of files or total storage space for your media or content.

Flexible and Scalable

Using a wide range of screens and media players you can scale any project with absolute confidence. You can even integrate third party software via a URL.

Works Offline

The hardware will download the media files that you publish to the screens and store them on the internal memory, meaning that even if the screen or player is not connected to the internet it will display the scheduled content.

Cloud-Based

No need to install software to your PC or have your own dedicated server, our cloud-based Digital Signage CMS portal can be accessed instantly from anywhere in the world.

Pre-Designed Layouts

Pre-developed playlists, including the editable templates and the associated media files, can be downloaded and edited so you don't need to start from scratch.

all pricing excludes VAT, delivery & installation unless stated otherwise

Item	Item description	unit cost
	upgrade from media to network cloud signage player	
bb	CMS Upgrade from standalone media player to network digital signage	£125

- most digital displays with in-built media players can be upgrade to networked devices
- this makes them manageable and controllable from the cloud (anywhere in the world)
- so, scheduled playlists can be sent to specific screens to be played at specific times
- real-time content and playlist updates to all screens/displays on the network (in the cloud)
- **touch-screen applications can also be created within the CMS for suitable hardware devices**
- SaaS (software as a service) so payable annual, or 3-year term available or lifetime licence

upgrade std media player to network manageable device from the Cloud

digital signage software

Overview

Buttons

Link your different pages together and trigger a host of different actions. Use buttons to prompt videos to start, launch websites, link to different pages or playlists and even launch Android compatible applications; all this without having to write any code. You can also utilise Button Groups to create and manage multiple buttons at once.

Videos

Set your videos to play automatically or assign a "play" button to have them play on command. You can even assign multiple buttons to play different videos on the same page, allowing you to create a video gallery.

Static Text

Allows you to input custom text values. Edit the font, colour and size of your text.

Weather Widget

Display a real time local weather forecast at a glance.

Time and Date

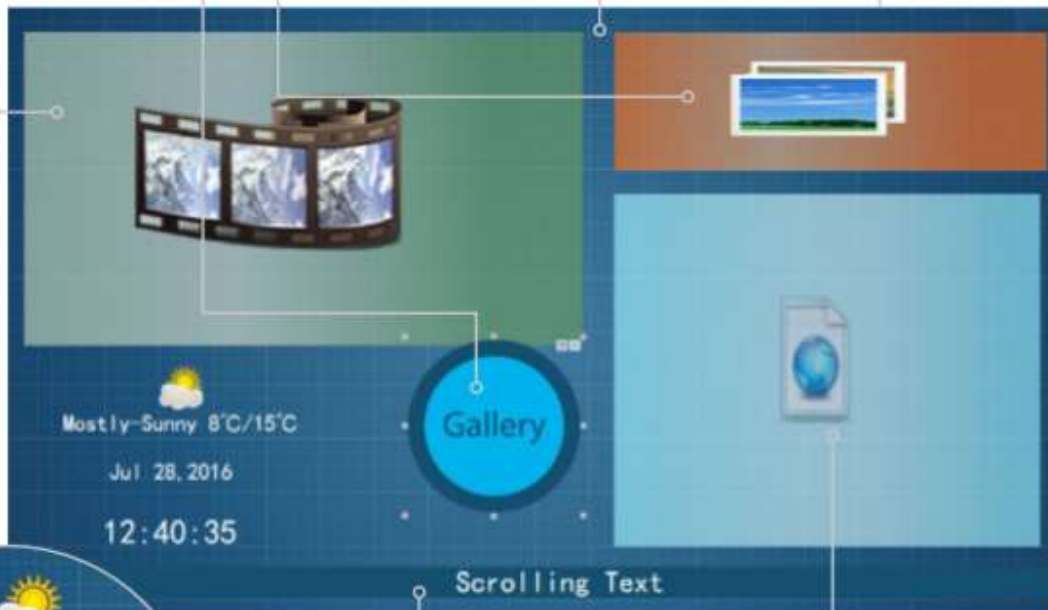

Display the time and date in a variety of different formats and choose exactly what colour you want to use.

Images

Insert your images into this zone and set the duration time and transition effect to display your images like a slideshow.

Backgrounds

Set a specific colour or use your own image as your background to frame your media zones. You can also design your entire interface, including buttons, as a background image and then place empty button zones over your graphics.

Scrolling Text

Display a scrolling ticker tape message.

Webpages

Incorporating websites and webpages into your Touch Screen content opens up a whole new world of opportunities. Any complicated functions that can't be achieved by using the standard tools of our CMS can be achieved by creating a webpage. Interact with your company website, your social media feeds, online maps, HTML 5 elements and much more.

WHAT IT LOOKS LIKE ON SCREEN

Branding

Insert your company's logo and use the company colours to completely personalise your Touch Screen Content.

Media Galleries

Create user friendly galleries of your image and video content. Personalise your carousel with the length of each slide and the transition affect.

Apps

If you have an Android compatible app that you would like to use you can integrate it into your touch screen content. It can then be launched within the playlist with the touch of a button.

Screensavers

You can set a "timeout" period for your content; if the screen isn't touched during this period you can assign a separate playlist to display automatically. This can include images, videos, webpages and even RSS feeds.

thank you!
